

Electromechanical Fuel Shutoff Valves

Model M5081

M25 and M50 Series

- Instant Response to Shut Off Signal
- Positive Valve Closure
- Vents Gases Trapped After Shutdown
- Explosion-proof Models Available
- Models Available for Magneto, CD Ignition or 12/24 VDC
- Normally Energized Model Available

Description

These fuel shutoff valves are semi-automatic devices for shutdown of natural gas fueled engines. The valve is opened manually and closes when the electromagnet is energized and trips the latch. The valve can be closed manually by turning the valve's disconnect knob. A normally energized model is available that holds the valve open electrically and closes when the coil is de-energized. A vent in the valve body relieves trapped gas when the valve closes. A pop-out indicator button informs you when the valve is open or closed.

The valve's tripping power is provided by an engine ignition system or battery. Models are available for magneto, CD ignition or 12/24 V battery.

The **M2582 is a 1 inch (25 mm) valve** with 1 NPT connections. It has one SPDT snap-switch. The valve body is made of sandcast aluminum. It does not include the open/close indicator button.

M5081 is a 2 inch (51 mm) valve with 2 NPT connections. It has *two* SPDT snap-switches. The valve body is available in sandcast aluminum or cast steel (optional).

M5081FS is the same as the M5081 but has a normally energized circuit. This circuit allows the valve to be held open electrically and close by interruption of the coil's power circuit. A **manual trip knob is not available on this model.** An optional 2 in. (51 mm) steel flange pipe connection is available for M5081 and M5081FS steel body models (see Dimensions page 3).

Specifications

Valve Body: Sandcast aluminum, painted red (corrosion resistance). Optional cast steel available for M5081 and M5081FS models only.

Valve Seat: Buna-N

Maximum Pressure Rating:

- M2582: 80 psig (552 kPa) [5.52 bar]
- M5081: 100 psig (689 kPa) [6.89 bar]
- M5081FS: 100 psig (689 kPa) [6.89 bar]

Coil Rating: Intermittent duty; coil

- type must match power source;
- CD ignition coil resistance: 72 Ω
CD primary voltage: 1.38 to 3.8 A
- M5081FS model: Energized to run (continuous-duty coil) coil resistance:
12 Volt model: 33 Ω (0.36 A)
24 Volt model: 136 Ω (0.17 A)
- Magneto ignition coil resistance: 0.5 Ω
- Magneto primary voltage: 1 to 5 A
- Battery coil resistance : 7 Ω
12 or 24 VDC: 1.2 to 2.4 A

Wiring (See Internal Wiring page 2):

- M2582: Wire leads
- M5081 and M5081FS: Terminal blocks

Snap-switch Rating: 5 A @ 480 VAC

Laboratory Approval: CSA listed for Class I, Groups C and D Hazardous Locations. 5 amps maximum; intermittent duty; models M5081 and M5081-CD engine ignition powered, and model M5081-B, 12 or 24 VAC or VDC; switch contacts rated 5 A @ 480 VAC maximum.

Options and Accessories

Diode Package (65010065)

The Murphy 202 V diode package is designed to allow the fuel shutoff valve to be used with dual Magneto Ignition systems. Sold separately (see How to Order).

Magnetic Switch Adapter

As ignition systems wear from usage their power output becomes less and less. Ignition may not have the capacity to reliably trip the fuel valve. Therefore, the use of a Magnetic Switch Adapter for CD ignition systems is recommended. The adapter stores energy from the CD ignition to trip the fuel valve. Three models are available:

65020126: For Negative Ground CD Ignitions up to 240 VDC

65020127: For Positive Ground CD Ignitions up to 450 VDC

65020155: For Negative Ground CD Ignitions 240 VDC to 450 VDC

Warranty

A two-year limited warranty on materials and workmanship is given with this Murphy product. Details are available on request and are packed with each unit.

Internal Wiring

M2582

NOTE: For grounding the ignition (CD models only) through the fuel valve's internal snap-switch, a Murphy Magnetic Switch adapter (see page 4) must be used in addition to a 100 ohm, 2 watt resistor (supplied with valve).

M5081 and M5081FS

M5081 and M5081FS

NOTE: For grounding the ignition (CD models only) through the fuel valve's internal snap-switch, a Murphy Magnetic Switch adapter (see page 4) must be used in addition to a 100 ohm, 2 watt resistor (supplied with valve).
